1 Read and copy.

People have always cleaned water for drinking. For

example, the Ancient Greeks heated

water and ran it through sand to catch

the dirty parts. Later, a special bag was used.

The dirty water went into the bag, the bag caught

and held the dirt and then cleaner water came out.

Fortunately, modern scientists have

invented the plastic 'LifeStraw' and bags with

chemicals which take out the bacteria. Desalination

plants also give us clean drinking water today.

2 Copy. Choose the right word.

The (energy/water) we use is making the
